Declaration of AI assistance

Manuscript: Reflexive Descent to Minimal Seeds: Uniform Bounds and Free Sums.
Author: Deep Bhattacharjee.
Prepared: October 26, 2026.

This is a self-prepared disclosure for author review. It is not an official publisher form and does not contain the author's signature or approval.

The earlier joint manuscript with Ushashi Bhattacharya describes assistance from Claude (Anthropic) and searches using Anaxia. The present revision used ChatGPT/Codex (OpenAI) for proof development, computational checking, Lean formalization, manuscript editing and package preparation. No AI system is listed as an author. The preceding joint work remains credited.

The release distinguishes the core geometric Lean proofs and the checked finite graph from the unformalized geometric cover-completeness and census inputs. The exact D_4 and full-manuscript formalization are not claimed. Formal verification does not replace the author's responsibility to review the definitions, scope, proofs, citations and final manuscript.

The author must confirm the accuracy of this declaration and any required human understanding or exclusive submission declarations before submitting the work to a journal or a preprint service.
